Overview

Market

Product

Recommend

Recommendation

A. Overall Business Performance

- Revenue and profit have grown steadily year-on-year, with particularly significant growth during 2013–2014.
- Company-wide Profit Margin is approximately 11–12%, relatively good for the retail/e-commerce industry, but varies considerably between markets and product groups.
- Return Rate is around 4.7%, not yet alarming but requires monitoring in high-return product categories.

B. Market Recommendations

1. Prioritize Core Markets: **US, LATAM & EU**

These markets contribute the highest revenue and order volume while maintaining relatively stable profit margins. Continued investment in marketing, inventory, and sales resources is recommended to maximize long-term growth.

2. Expand Growth Markets: **Canada & APAC**

Although current revenue is relatively lower, these markets demonstrate strong revenue growth and promising profitability. Gradual expansion through targeted campaigns and product investment is recommended.

3. Improve Underperforming Markets: **EMEA**

EMEA contributes the lowest revenue and one of the weakest profit margins. Review pricing strategies, product offerings, and operational efficiency before allocating additional business resources.

C. Product Recommendations

1. Strengthen Strategic Product Categories

Technology delivers the highest revenue and profit, making it the primary growth driver. Continue investing in high-performing products and maintain competitive market positioning.

2. Optimize Low-Performing Products

Identify sub-categories with low profit margins or high return rates. Review pricing, product quality, supplier performance, and inventory management to improve profitability.

3. Monitor Product Performance Continuously

Regularly track sales, profit margin, and return rate across categories and sub-categories to quickly identify new growth opportunities and operational risks.
